

MF/MF-U SERIES

MEASURING MICROSCOPES

OPTICAL MEASURING

Measuring microscopes MF Series/MF-U Series

Expectations for measuring microscopes

A measuring microscope serves the purpose of performing both measurement and observation. It allows for the inspection of a variety of objects including semiconductor devices, electronic and electrical components, automobile precision components, resin moldings, tools and medical products. For example, this type of microscope can be used to measure an object that is too soft for contact measurement or the diameter of a hole that is too small for a measurement probe to contact. A balance between optical performance, overall accuracy, and ease of use is an important requirement for a measuring microscope. Such device enables you to observe and measure elements that have either been invisible or difficult to see. Mitutoyo believes that expectations for measuring microscopes will continue to grow and that user friendliness, high measurement data throughput and environmental friendliness will be demanded at the same time. To play our part in supporting essential technologies in the industry, we will continue to provide high-quality, high-definition measuring microscopes, while staying true to our commitments and beliefs.

From design and development to support after delivery

Mitutoyo designs, develops and manufactures all microscope parts – including those for the body, such as lenses and optical tubes – and the highly accurate built-in digital scale. Our in-house design and development processes enable us to, proactively, offer consultation on special requirements and respond to customer requests, such as those for customized fabrication.

Mitutoyo carefully delivers the microscope from the production plant to its desired destination* and installs and adjusts it on-site. The packaging box is recyclable, which reduces waste and helps the environment. After adjustment, customers have the choice of taking advantage of a maintenance service contract or use our reliable after-sales services according to their needs. This ensures a reliable and confident use of their Mitutoyo microscope for a long time to come.

*If a dedicated delivery service is used.

In pursuit of optical performance — the essence of microscopy —

These microscopes use an optical design for the optical tube and objective to reduce flare within the optical system as much as possible to enable the clear display of subtle details of inspected objects. This series renders even a clear, high-contrast observation of black resin surfaces possible. The MF-U Series is equipped with the proven FS optical system metal microscope head and displays clear images with high color reproducibility in which the three primary colors blue, red and yellow are corrected. (The plan apochromat specifications are used for the objective*.) For the MF and MF-U Series, an LED- or halogen-based lighting system can be adopted. Higher lighting efficiency and sufficient illuminance within the optical system provide an environment for high-magnification measurement and bright-field as well as dark-field observation in which you can work efficiently without tiring out your eyes.

* Specifications according to which aberrations across the image surface and chromatic aberrations in the wave length range of the three primary colors (blue, yellow and red) are corrected.

In pursuit of measuring accuracy — close to JIS grade 0 —

X and Y axes: $(2.2+0.02L)\mu\text{m}$ or less

Reference) Measuring accuracy of each axis of a JIS B 7153 measuring microscope (at 20°C)
Grade 0: $(2+0.01L)\mu\text{m}$ or less
Grade 1: $(4+0.02L)\mu\text{m}$ or less L: measuring length (mm)

(common to MF D and MF-U D)

A high-level optical performance and overall measuring accuracy are essential features for a measuring microscope. The MF and MF-U Series realizes the measuring accuracy stipulated by the above standards for every stage size*.

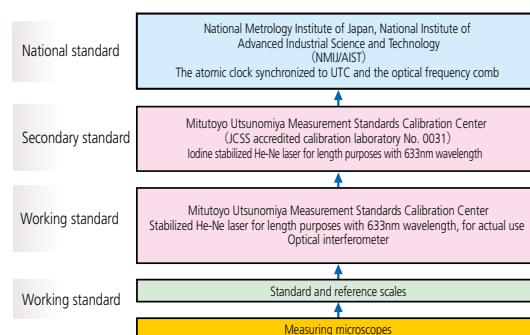

This series is useful for any measurement because it offers both long stroke measurement and high accuracy at the same time.

*Conforms to the JIS B 7153 measurement method for the X and Y axes. The above measuring accuracy graph is an example and does not represent all main unit accuracies.

The digital scale built into the microscope is a photoelectric type transmission linear encoder with a maximum response speed of 50 m/min. This highly accurate encoder was developed in an underground laboratory where the world's best scale accuracy evaluation technique is available. Mitutoyo was the first manufacturer to acquire ISO/IEC 17025(JCSS) accreditation for calibrating line standards (standard scales up to 500 mm long) in Japan.

For safe use — traceability to national standards —

To establish and maintain the traceability of measuring tools and instruments, Mitutoyo uses length standards traceable to the national standards in Japan to calibrate the standard used to calibrate measuring tools and instruments.

Solutions provided by measuring microscopes

Observation and inspection of small areas

By using various types of illumination, the MF Series can more precisely reproduce the colors and shapes of objects that are observed and inspected.

The MF-U Series microscopes are highly versatile instruments that offer microscope observation functions such as dark-field mode (to determine surface scratches and small steps, which are difficult to see in bright-field mode), simple polarization (to observe coloration or contrast through the polarizer or analyzer by adopting polarization properties) and differential interference (to observe small surface steps and other elements in color contrast using the polarization filter with a differential interference prism), as well as measurement functions.

Bright-field observation

Dark-field observation

Polarized observation

Differential interference observation

Easy image photography

Anyone can easily photograph microscope images by attaching a digital camera to the microscope. By means of a general-purpose C-mount adapter, any digital camera model that supports C-mounting can be attached. In this way, several people can simultaneously analyze and evaluate the microscope image displayed on the monitor. Also, an inspection chart attached to the image can be generated automatically.

MF-B2017D + Vision Unit

Microscope-based high-resolution measurement

It is possible to build a manual image measurement system by equipping a measuring microscope with the image measurement option (vision unit). Because the software constantly transmits stage displacements, measurements within the camera imaging range (on the screen) as well as those wider than the screen are supported. In addition, automatic edge detection provides an efficient measurement environment with a high throughput.

However, eyepiece resolution might be superior to camera resolution in some cases. For example, the surface of a molded item made of black resin might be clearer to the human eye than to the camera (monitor observation). Therefore, a measuring microscope that also enables you to see the surface and other elements is a system that has a very high added value. We recommend to connect the two-dimensional data processing unit QM-Data200 (a dedicated control unit) to the measuring microscope for such dimensional measurement.

MF-UB1010D + QM-Data 200

Measuring microscopes MF Series

Universal measuring microscopes MF-U Series

Sliding Nosepiece New design

(Factory-set option of MF D)

Sliding nosepiece with two objectives mounted.

An objective and LED circular illuminator mounted on the sliding nosepiece.

The MF (finite-corrected optical system) measuring microscope usually only allows a single objective to be mounted which needs to be replaced for every magnification change. The new sliding nosepiece allows two objectives to be mounted, thus making for quick magnification change. This nosepiece design also enables installation of an LED circular illumination unit. These arrangements support a quick change of magnification and versatile illumination.

The new optional sliding nosepiece vastly adds to user-friendliness. One of two objectives can quickly be moved into position to change the magnification, and it also allows the use of a circular illuminator. The free choice of mounting position for the digital display improves the operability in this series.

High-visibility digital display

(common to MF D and MF-U D)

New design

Front of display

Rear of display

The resolution can be switched to $1\mu\text{m}$, $0.5\mu\text{m}$ or $0.1\mu\text{m}$ for the digital display (two or three axes) as a standard for all models. This grants high resolution measurement. Zero-set, direction changeover and smoothing functions also come as a standard. (Zero can be set using the switch near the X or Y handwheels.)

The low-profile display boasts large digits and allows mounting at any position appropriate for the operator's view. The customer has the choice of installation on the left or right side of the column.

Because the general-purpose RS-232C format is adopted for data transfer, data can be output to a standard printer or personal computer. It also offers the opportunity of transferring the display readings to spreadsheet software.

Measuring microscopes MF Series

Universal measuring microscopes MF-U Series

Height measurement with a high focus repeatability

(Option on **MF D** / factory-set option on **MF-U D**) For details, see page 35.

Focus repeatability is important when measuring a vertical step or other element using the microscope.

In particular, measurement errors due to the depth of focus of the objective are inevitable. The MF and MF-U Series measuring microscopes have a focus pilot, which enhances focus repeatability. The focus pilot is mounted on the TV camera port section in the main unit as an add-on unit and enables focusing position detection with high accuracy and repeatability. This realizes higher repeatability than a visual check and decreases variation in measured values caused by human error.

Two types of focus patterns are available, either of which can be selected according to the size of the part to be focused on or the surface state, material or other properties of the inspected object. A clear, bright, high-intensity LED (green or red) is employed as the light source. The focus pattern, for which brightness can be steplessly adjusted and checked on the eyepiece or TV monitor. This substantially improves measurement throughput.

Wide-field observation

(Common to **MF D** and **MF-U D**)

The best-in-class eyepiece field number* of 24mm (for WF10X) offers a wide viewing field that helps prevent affecting your eyes or causing fatigue in long observation or measurement sessions. The WF10X eyepiece features wider diopter adjustment ranges on the left and right sides than previous products.

* Width of an inspected object that can be seen across the whole viewing field when a 1X objective is used

LED and halogen light options for transmitted and reflected illumination

(options common and essential to **MF D/MF-U D**)

Transmitted LED illumination unit (common to MF/MF-U Series) Reflected LED illumination unit (for MF Series) Reflected LED illumination unit (for MF-U Series)

An LED or halogen light can be selected for the coaxial illumination in the main unit. While the conventional halogen light can be used for observation and measurement, the LED light can also be selected if you want to reduce the time lost to replace a failed halogen bulb with a new one and need high intensity illumination that quickly responds to brightness adjustment.

The LED light has a long working life*¹ and won't fail all of a sudden.

In addition, the visibility, brightness and coloration are constant because, unlike fluorescent tubes, the LED light is free from glare and changes in color temperature. This means less eye fatigue after extended observation. Because the LED consumes little power and radiates little heat, measurement is economical and produces less heat-induced effects on inspected objects*². In addition, this light source is impact resistant and does not contain environmental toxins.

All the models in the MF and MF-U Series have transmitted and reflected illumination aperture-diaphragms as standard to enable observation and measurement with less light diffraction.

*¹: The working life will be shorter if the maximum illuminance is always used.

*²: The LED light for MF/MF-U Series incorporates a quiet cooling fan to further reduce heat effects.

LED illumination

Halogen illumination

Quick-release mechanism*¹ and zero-set switch incorporated*² (Common to MF D and MF-U D)

The stage movement can be switched between extremely coarse and fine (FREE and LOCK) by using the quick release knobs on the X and Y handles. These handles are useful for freeing the stage when the distance to the measurement position is long or you want to quickly return to a reference position.

Because this mechanism uses the twist-roller method, switching causes little impact and enables smooth movement. Because the display zero-set switches are located near the handles*², you can focus on the eyepiece during measurement and keep your hand near the handle almost all the time except when adjusting the focus.

*1: Patent registered in Japan

*2: The zero-set buttons are located on the X and Y axes, not the Z axis.

Stage variations including long stroke (common to MF D and MF-U D)

Inspected objects vary in size.

Widely used in every industry branch, this series provides many measurement stroke variations.

It offers a stage for long stroke measurement of 400×200×220 mm in X, Y and Z. This is useful when measuring printed circuit boards, shafts, knife tools and other objects. Although the standard model has a Z-axis range of 220 mm, the Z axis can be extended with a column upgrade.

A swivel rotation mechanism* is also provided as standard. This mechanism is useful when fixing an inspected object in parallel with the table movement direction.

*Only for models with a Y-axis range of 170 mm or longer

Z-Axis handles provided on both sides of standard model (MF D and MF-U D)

Because the Z axis handles are placed on both sides of the column in standard models, the user can easily operate one of them regardless of left- or right-handedness. The digital display can also be installed on either side of the column to set up an environment suited to the user's dominant hand.

Ergonomics have also been taken into consideration, and the handle is located in a position where a user of shorter stature can comfortably turn it.

Tilting optical tube of standard model (MF-U D)

The eye point adjustability to a position suitable for the user's stature guarantee comfortable observation. The column can be fixed in any angle between 0° and 30°. Plus, the reticle is replaced in the twink of an eye.

Highly rigid column base (Common to MF D and MF-U D)

The base that supports the column holding the optical tube and the rest of the microscope must be absolutely rigid to enable observation and measurement using any amount of magnification.

This series has been repeatedly evaluated regarding various aspects including a drop test*, transportation test*, and smoothing test and provides steady vision and consistent accuracy over the entire stroke.

To enhance rigidity, horizontal ribs have been added within the column. The power supply section is located outside the base to reduce heat effects for higher base rigidity and highly accurate measurement.

*Proprietary Mitutoyo tests executed using appropriate procedures.

Column

Measuring microscopes

MF Series

MF-B1010D

The binocular tube (eyepiece) and illumination unit are optional accessories.

MF-B2010D

The binocular tube (eyepiece) and illumination unit are optional accessories.

MF-B2017D

The binocular tube (eyepiece) and illumination unit are optional accessories.

Features

- Observation with a clear and flare-less erect image and a wide field of view
- Highest measuring accuracy in its class (conforms to JIS B 7153)
- ML series, high-NA objectives that are specially designed for the MF series (long working distance type)
- Illumination unit (reflected/transmitted) selectable from a high-intensity LED or halogen bulb (required)
- Variable aperture diaphragm (reflected/transmitted) allows observation measurement while suppressing light diffraction
- Variety of standardized stages in sizes up to 400x200 mm
- Quick-release mechanism useful for moving the stage quickly when measuring workpieces that are large in size or quantity
- Coarse/fine feed handles equipped as standard on both sides allow precise focus and observation measurement regardless of left-/right-handedness
- High-magnification eyepiece observation up to 2000X
- Standard measuring microscope that has a wide variety of optional accessories including a Vision Unit and various digital CCD cameras
- Low-noise design

**MF-B3017D**

The binocular tube (eyepiece) and illumination unit are optional accessories.

**MF-B4020D**

The binocular tube (eyepiece) and illumination unit are optional accessories.

To the next stage

Motorized X, Y and Z axes on the measuring microscope provide improved operability. Image Auto Focus (AF) is enabled by using the image detection unit (option).

MF-G2017D

- * The binocular tube, eyepieces and LED illumination unit are optional accessories.
- * A separate LED control unit and a control unit are included.

MF-UG4020D

- * The turret, objectives and LED illumination unit are optional accessories.
- * A separate LED control unit and a control unit are included.

MF-UE2017D

- * The turret, objectives and LED illumination unit are optional accessories.
- * A separate LED control unit and a control unit are included.

Features

- The measuring microscopes' X, Y and Z axes are now motor-driven, the stage can be operated from a remote control box. A joystick is used to operate the X and Y axes. A jog shuttle moves the Z axis, thus realizing a natural feeling when handling the equipment. Furthermore, these microscopes are equipped with a Z limit that you can use to set the lower limit of the Z-axis movement, which enables the user to prevent collisions of the objective and the workpiece.
- The operator is relieved from fatigue resulting from repeated handle-turning.
- Installing a vision unit allows the performing of vision AF (auto focus).^{*1} For the MF-U power type and MF-U power LAF type, selecting the power turret makes it possible for the microscope to automatically recognize the position of the objective in the vision unit.^{*2}
- A power model line-up with large stage sizes ranging from 200×170 mm to 400×200 mm
- A button for coarse and fine feed switching and speed-adjustment function that are highly useful during long stroke sliding and fine positioning, are provided as standard equipment.
- The buttons on the remote control box, which is used to perform operations, have been placed to provide operations that feel natural.
- The remote control box is standard equipped with a data output button and counter reset buttons for the X, Y, and Z axes, which enables you to perform a variety of operations remotely.
- Products equipped with LAF (laser auto focus) are also included in the lineup of MF-U power products, which improves the efficiency of the focusing operation. Models that come with LAF are equipped not only with the normal Just Focus (JF) function, but also with the Tracking Focus (TF) function that maintains the focus as the stage moves. These functions cater to focusing requirements in a variety of situations, reducing the amount of work that the operator has to perform.

*1: A separate vision AF cable (No. 12AAN358) is required.

*2: A separate RS-232C cable (No. 12AAA807) is required.

Motor-driven measuring microscopes MF Series/MF-U Series

Motor-driven

The X, Y, and Z axes are all motor-driven. Movements along the X and Y axes are controlled via a joystick. A jog shuttle operates the Z axis, so operations during measurement can be performed by the remote control box. This eliminates the conventional handle-turning and focusing operations, reducing fatigue for the operator.

The X and Y axes are driven with a maximum feed speed of 40 mm/s and the Z axis with a maximum feed speed of 20 mm/s. The lineup includes models that have large stages of sizes ranging from 200×170 mm to 400×200 mm. Furthermore, the change to a motor-driven Z axis enables you to use the new vision AF function, provided you also use the optional vision unit.*1

*1: A separate vision AF cable (No. 12AAN358) must be connected.

Counter display

A digital counter with a large display for good readability and with reset buttons is part of the standard equipment. This counter also offers the following standard functions: display resolution switching, zero-set, direction changeover and smoothing. It is thin in depth but boasts a large display. Because the counter's mounting position can be freely changed, the counter can be placed in the optimum position for the operator.

Calculation processor

QM-Data 200

* Combination of the MF-G2017D and the QM-Data 200

Vision unit

* Combination of the MF-G2017D, the 10D vision unit, and a vision AF cable

While our motor-driven measuring microscopes inherit the options and functions of their manually operated counterparts, they have even greater expandability. As with our conventional measuring microscopes, our motor-driven models can be equipped with the "QM-Data 200" two-dimensional data processing unit and the "Vision Unit" manual image measurement system that detects edges with its installed digital camera.

It is now possible to perform vision AF by using a vision AF cable together with a vision unit, thanks to the new motor drive.

Auto Focus

Vision AF (common option)

By using an optional vision unit and vision AF cable, you can perform vision AF. In the vision unit software QSPAK, the position in the acquired image data with the highest contrast is detected and the autofocus operation performed. This operation can be conducted faster than carrying out focusing with the naked eye, which contributes to reduction in operation time and operator fatigue.

Power turret (option for Motor drive MF-U / MF)

The customer has the choice between different turrets for the MF-U power product and MF-U power LAF product. By selecting the power turret and equipping the measuring microscope with an optional vision unit, it is possible to change and detect the turret position.*1

This is a new function that is available in the QSPAK VUE version 4.1 and subsequent versions of the 10D vision unit software.

You can use the software to change and automatically detect the turret position, so there is no longer any need to handle the turret. Furthermore, this also fixes the problem of forgetting to change calibration values when you change the magnification, thereby providing you with a system that is more reliable and easy to use.

*1: A separate RS-232C cable (No. 12AAA807) is required.

Turret position display in QSPAK

*This image corresponds to 4-hole power turrets and 4-hole turrets with sensors.

Laser Auto Focus (Power LAF type only)

LAF (laser autofocus) can be performed by the power LAF product. By employing AF that uses the TTL (Through The Lens) method, in which a semiconductor laser beam with a wavelength of 690 nm passes through the lens, these microscopes can perform AF even on minutely-small areas.

Laser autofocus has the advantage of better repeatability than focusing with the naked eye, and it can be used to measure heights. Furthermore, the following two types of focus functions are equipped as standard: JF (Just Focus), which can be used to target the laser on the point where you want to focus in order to detect the height, and TF (Tracking Focus), which always tracks the focus position.

Motor-driven measuring microscopes

MF Series/MF-U Series

Specifications for MF D

Model No.		MF-G2017D	MF-G3017D	MF-G4020D
Order No.		176-781*	176-782*	176-783*
Optical tube (eyepiece(s) required)		Monocular or binocular (angle of column: 25°)		
Observation image		Standard TV camera port for all models, reticle (broken cross-hair, line width: 5μm), observation/TV camera = 50/50		
Observation method		Erect image		
Observation method		Bright-field observation		
Eyepiece (optional) Adjustable diopter		10X (eyepiece field number: 24), 15X, 20X Note: Monocular - one 10X eyepiece provided as standard; Binocular - two 10X eyepieces provided as standard		
Objective (optional)		ML objective 3X (provided as standard), 1X, 5X, 10X, 20X, 50X, 100X		
Z axis	Max. workpiece height	220mm		
	Feed mechanism	Motordrive (Maximum measuring speed: 20mm/s)		
Illumination unit (required)	LED	Transmitted: Telecentric, built-in aperture diaphragm, white LED light source, stepless brightness adjustment, equipped with cooling fan Reflected: Kohler illumination with adjustable aperture diaphragm, white LED light source, stepless brightness adjustment Control unit: Power switch (main switch), AC power supply input connector (100 to 240V)		
	Halogen	Transmitted: Telecentric, built-in aperture diaphragm, 12V/50W halogen lamp, stepless brightness adjustment, with cooling fan Reflected: Kohler illumination with adjustable aperture diaphragm, 12V50W halogen lamp, stepless brightness adjustment with cooling fan Control unit: Power switch (main switch), AC power supply input connector (100 to 240V)		
Illumination filter		One GIF filter is provided as standard (and mountable for both transmitted and reflected illumination)		
Stage	Measurement range	200×170mm	300×170mm	400×200mm
	Tabletop size	410×342mm	510×342mm	610×342mm
	Effective stage glass size	270×240mm	370×240mm	440×240mm
	Swiveling angle	±5°		±3°
	Maximum table load	20kg		15kg
Measurement system		High-accuracy digital scale		
Measuring accuracy*1 (X and Y axes, when not loaded)		(2.2 + 0.02L)μm, L: measuring length (mm)		
Digital display	Minimum reading	1/0.5/0.1μm switchable		
	Display axes	X, Y and Z axes		
	Functions	Zero-setting, direction switching		
Remote BOX		Joystick (X and Y axes drive), lock button (X and Y axes), speed adjustment (X, Y and Z axes), coarse/fine adjustment button (X, Y and Z axes) Jog shuttle (Z axis drive), limit setting (Z axis), emergency stop switch, power source backup switch AF button (vision auto focus): effective when connecting to vision unit (optional) Reset button (X, Y and X axes counter), data output button		
Main unit dimensions (WxDxH)		632×892×782mm	682×892×782mm	757×907×782mm
Main unit mass		150kg	158kg	164kg
Control unit dimensions		355×364×106.5mm		
Main unit mass		7kg		
Dimensions for control unit for illumination unit (WxDxH)		114×365×96mm		
Mass for control unit for illumination unit		LED: 3.5kg, halogen: 4kg		
Maximum power consumption		230W		

* To denote your AC power cable add the following suffixes to the order No.: D for CEE, E for BS

*1: Measured in conformance with JIS B 7153.

Lenses

Our eyepieces provide a wide field of view (with field number 24 mm when using 10X magnification) to enable easy observation and measurement of objects. The standard objectives provide a bright image with a long working distance and little flare. For both the bright-field and dark-field FS objectives, plan apochromat specifications are used. We think that being able to observe and measure objects without fatigue, even for long periods of time, is very important.

Eyepieces

Tilting Binocular Tube	
Magnification	10X
Field number	24
Angle of column (tilt angle)	0~30°
Applicable model	Included in MF-U D as standard

For inspection or observation using a microscope, high resolution and an ultra-long working distance are important factors for objective usability. Also, applying the apochromat specifications (for correction of the red, blue and yellow wavelengths) to compensate chromatic aberration over a wide range of wavelengths and the plan specifications to correct distortion in the image surface, and point aberrations, is also important for getting a clear image across the whole field of view. Mitutoyo's high quality FS objectives provide these characteristics. This fact expands the range of applications for a microscope and greatly improves its usability. These objectives are also helpful when installed in a measuring microscope. The M Plan Apo series and BD Plan Apo series are developed for bright-field observation. The SL (super long) specifications are available for when a long working distance is required. The G Plan Apo series is available corrected for observation through glass of thickness 3.5 mm (or 2 to 5 mm upon special order).

Optional accessories

Illumination

The way illumination (a light source) is used is important for observing and measuring various inspected objects such as semiconductors, electronic or electric components, automobile precision components, resin moldings, tools, medical products, and printed materials with clarity and high contrast. Select the best illumination according to the shape, surface conditions, color, and materials in the inspected object.

A: Reflected illumination and transmitted illumination (required)

①

LED illumination unit

Order No.	176-445*
	Consists of lamp housing (for reflected illumination and transmitted illumination) and an LED control unit. The LED control unit can be fixed to the rear of the column of the microscope main unit. White light LED (low power consumption: 45W) Rated lifetime: approximately 30,000 hours Continuously variable brightness control Built-in cooling fan (includes an alarm for indicating that the fan has stopped) A color filter can be attached to a reflected or transmitted illumination unit.
External dimensions (mm)	Reflected illumination unit: 833x86 (maximum protrusion) Transmitted illumination unit: 68x103 (maximum protrusion) LED control unit: 114(W)x360(D)x96(H)
Applicable model	MF D

③

LED illumination unit

Order No.	176-446*
	Made up of lamp housing (for reflected illumination and transmitted illumination) and an LED control unit. The LED control unit can be fixed to the rear of the column of microscope main unit. White light LED (low power consumption: 55W) Rated lifetime: approximately 30,000 hours Continuously variable brightness control Built-in cooling fan (includes an alarm for indicating that the fan has stopped) A color filter can be attached to a reflected or transmitted illumination unit.
External dimensions (mm)	Reflected illumination unit: 68x66 (maximum protrusion) Transmitted illumination unit: 68x103 (maximum protrusion) LED control unit: 114(W)x360(D)x96(H)
Applicable model	MF-U D

MF series

MF-U series

②

Halogen illumination unit

Order No.	176-447* (MF D)/176-448 (MF-U D)
	Consists of lamp housing (for reflected illumination and transmitted illumination) and a halogen control unit. The halogen control unit can be fixed to the rear of the column of the microscope main unit. 12V, 50W halogen lamp, continuously variable brightness control Built-in cooling fan (includes an alarm for indicating that the fan has stopped) A color filter can be attached.
External dimensions (mm)	Reflected and transmitted illumination unit: 91x106 (maximum protrusion) Halogen control unit: 114(W)x360(D)x96(H)
Applicable model	MF D/MF-U D

Note: **MF-U D** is available only for transmitted illumination.

④

100W and 150W fiber optics cable illumination unit (external light source)

Order No.	176-315* (100W) · 176-316* (150W)
100W	12V, 100W halogen lamp (No. 517181) Rated life: 1,000 hours 12V, 100W high brightness halogen lamp (No. 12BAD602) Rated life: 50 hours Continuously variable brightness control
External dimensions (mm)	76(W)x235(D)x120(H), Fiberglass cable length: 1,500
150W	15V, 150W halogen lamp (No. 12BAJ076) Rated life: 500 hours 15V, 150W high brightness halogen lamp (No. 12BAJ075) Rated life: 50 hours Continuously variable brightness control
External dimensions (mm)	120(W)x273(D)x119(H), Fiberglass cable length: 1,500
Applicable model	For reflected illumination when selecting the halogen illumination unit with MF-U D

* To denote your AC power cable add the following suffixes to the order No.:
D for CEE, E for BS

B Dual swan-neck light pipe (external light source)	
Order No.	176-343*
	Fixed to the rear of the microscope column Continuously variable brightness control Includes a condenser lens Auto-brightness control can be used for the Vision Unit system (with external light source control cable No. 12AAD128). 12V, 100W halogen lamp (No. 517181), rated lifetime: 1,000 hours 12V, 100W high brightness halogen lamp (No. 12BAD602), rated life: 50 hours LB80 filter (No. 12AAG807)
External dimensions (mm)	76(W)×235(D)×120(H): includes only the light source Fiber optics cable length: 700 (from the rear fixed portion to the front edge) Maximum fiber bending radius: 60
Applicable model	MF D / MF-U D

* Order No. depends on the destination.

C Fiber-optic ring light (external light source)	
Order No.	176-366*
	Continuously variable brightness control Includes a condenser lens Auto-brightness control can be used for the Vision Unit system (with external light source control cable No. 12AAD128). 12V, 100W halogen lamp (No. 517181) Rated life: 1,000 hours 12V, 100W high brightness halogen lamp (No. 12BAD602) Rated life: 50 hours LB80 filter (No. 12AAG807)
External dimensions (mm)	76(W)×235(D)×120(H): includes only the light source Circular illumination unit: outside diameter: 60, inside diameter: 35 Maximum fiber length: 1,000
Applicable model	MF D (ML objective 10X or lower model)

* Order No. depends on the destination.

A: Reflected and transmitted illumination

The light is projected vertically downward onto the surface of an inspected object through an objective. An LED or halogen lamp is selectable as light source.

Image

B: Dual swan-neck light pipe

Light piped from a standalone halogen lamp unit and projected from two heads is suitable for three-dimensional observation. The condenser lens included as standard makes high brightness spot lighting possible.

Image

The four images show the same portion of an inspected object.

C: Fiber-optic ring light

Light piped from a standalone halogen lamp unit and projected from around the objective enables observation that is less affected by shadows due to surface irregularities and is suitable for image measurement.

Image

D: LED ring light

Light from an LED array surrounding the objective enables high contrast observation of deeply colored resins, circuit boards, and small cylindrical objects and is also suitable for image measurement. Plus, adjusting the brightness does not change the coloring.

Image

D LED ring light	
Order No.	176-367-2*
	Continuously variable brightness control Auto-brightness control can be used for the Vision Unit system (with external light source control cable No. 12AAG888).
External dimensions (mm)	75(W)×150(D)×90(H): only the control part Ring LED part: outside diameter: 70, height: 68 to 93 LED cable length: 1,500
Applicable model	MF D (ML objective 10X or lower model)

* To denote your AC line voltage add the following suffixes to the order No.:
(e.g.: 176-343D); D for CEE, E for BS

D LED ring light (for FS objectives)	
Order No.	Please contact us.
	Fixed to an objective and projects ring-shaped white LED light Continuously variable brightness control Auto-brightness control can be used for the Vision Unit system (with external light source control cable No. 12AAG888).
External dimensions (mm)	75(W)×150(D)×90(H): only the control part Ring LED part: outside diameter: 70, height: 65 to 80 LED cable length: 1,000
Applicable model	MF-U D (FS objective M plan Pro 10X or lower model)

Optional accessories

Manual image measurement

Vision unit

The Vision Unit turns your measuring microscope into a high-performance vision measuring system capable of significantly increasing productivity in quality assurance operations. Vision measurement simply involves generating enough points from the edges of workpiece features to ensure accuracy and then letting powerful PC-based software calculate the measurement results. An image measuring model that aligns edges during image measurement and a dedicated electronic model that can be used for general purposes are available. Both models can print out the measurement results or output them to spreadsheet software or inspection tables.

Typical system

For details, see Catalog No. E14008

Features

- Auto edge detection tool and various macro icons for easy measurement
- Easy-to-use graphics and measurement navigation
- Enables measurement results to be output to MS Excel*1 and an inspection table created on the same PC
- Enables tolerance zone analysis for measurement and calculation results, and various types of statistical processing for each item
- Auto-brightness control that precisely duplicates an illumination setting (when using the measuring microscopes MF-D and MF-UD together)
- Enables measurement within one screen
- Images can be input or saved (in BMP or JPEG format).
- Image AF is possible when using the motorized measuring microscope MF series/MF-U series (refer to page 20).

*1. MS Excel is a Microsoft product.

More user-friendly manual measurement environments available (Wide-field measurement)

Upsizing of the image sensor has made the field of view approximately 40% wider than conventional for both X and Y directions, thus allowing concurrent observation of the circumference of a measurement point.

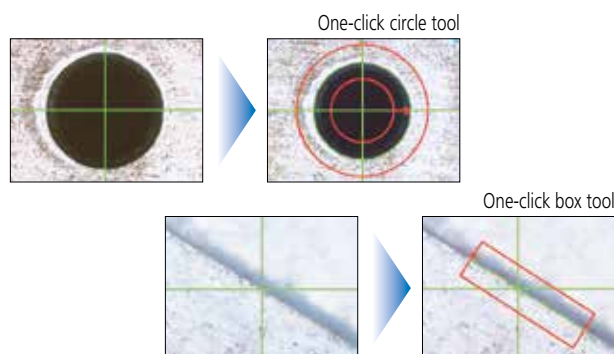

* An actual image using objective ML1X plus LED ring light

Edge detection support tools (One-click tools)

[Patent registered (application country: Japan)]

Each tool has the function of automatically discriminating operations from self tool setup to edge detection/calculation by merely single-clicking the vicinity of a measurement point edge with the mouse. If measurement is performed in one tool window, these tools drastically reduce measurement time since stage travel becomes unnecessary.

Specifications

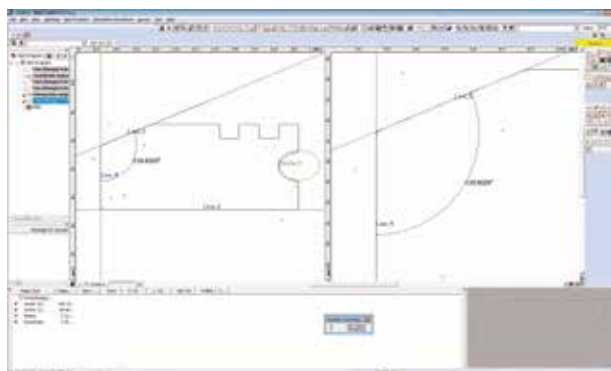

Vision Unit 10D	
Order No.	359-763
Magnification of optical system	0.5X: when a microscope is attached (0.5X: when using a TV adapter)
Image detection	High sensitivity 1/2-inch CMOS color camera with 300 million pixels
Resolution	0.1μm
Measuring accuracy for each axis (in a 20°C environment)	Depends on measuring microscope
Accuracy (in a 20°C environment)	Depends on measuring microscope Reference: when using a 3X ML objective (performing an inspection using our standard sample) Screen-internal measuring accuracy: ±2.5μm or less Screen-internal repeatability (2σ): ±1μm or less
PC system*	Windows 7
Software*	QSPAK Vision Unit
Applicable model	MF D / MF-U D

* Software (QSPAK) and calculation processor are required separately.

FORMPAK-QV (optional software)

FORMPAK-QV allows contour analysis and contour tolerancing against the nominal value, from the data acquired using QSPAK.

- Contour tolerancing function
- Fine contour analysis function
- Report generation function

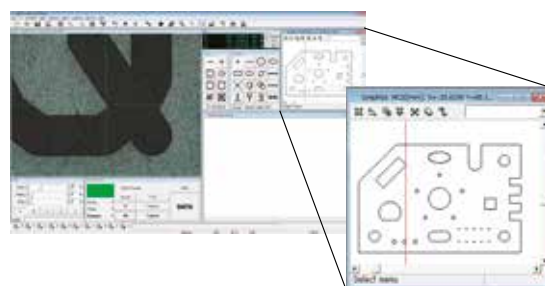

CAD import & export (optional software)

Operability has greatly improved, and the time required to create a part program has been vastly reduced, by importing the CAD data (DXF, IGES), as generated at the product-design stage, to QSPAK. The measurement result from QSPAK can be converted to CAD data.

FEATURES

- The nominal value of each measuring item is entered automatically.
- The graphics window can be used to calculate elements.
- Graphics data can be output in a specified CAD data format.

Optional accessories

2-D data processing unit

QM-Data200

Typical system

Foot switch No. 12AAJ088

Features

- Displays high-contrast color graphics on a large, backlit LCD screen
- Enables frequently-performed complex measurement (such as measuring the distance between two circles) to be performed by pressing just one button
- Teaching function for measuring procedure
- Efficient measurement by performing measuring point navigation in the repeat mode
- Eliminates the need to switch measuring command keys through AI-based measurement (which automatically determines the measured element)
- Includes a user menu in which you can individually register measuring commands or part programs
- Enables tolerance zone measurement for measurement and calculation results, and various types of statistical processing for each item
- Enables measurement results to be output to the MS-Excel*¹ PC spreadsheet software in CSV format
- Enables part programs and measurement results to be stored in USB-connected memory*²
- A stand that can be tilted to adjust the angle to an easily viewable position
- Enables measurement during printing

*1. MS-Excel is a Microsoft product.

*2. Not all commercially available USB-connected memory is supported.

Specifications

QM-Data200 (stand type)	
Order No.	264-155*
Displayed language	Switched among 16 languages (Japanese, English, French, German, Italian, Spanish, Portuguese, Czech, Chinese (traditional), Chinese (simplified), Korean, Turkish, Swedish, Polish, Dutch and Hungarian)
Unit of measurement	Length: mm, angle: degree/degree-minute-second (switchable)
Resolution	0.1μm
Program function	Creating, performing, and editing measuring procedures
Statistical processing	The measured item, number of data items, maximum value, minimum value, average value, standard deviation, range, histogram, and statistics for each measuring function (statistics for each command)
Display field	Color TFT LCD (with a backlight)
Tilt feature	Available
I/O connector	XYZ: for linear scale input ... up to 3 axes RS-232C Ⓢ: for connecting a PC (measuring result) RS-232C Ⓢ: for connecting the counter of the measuring machine main unit FS: for connecting a foot switch PRINTER: for connecting a receipt or external printer (measuring result) USB-FDD: for connecting a USB-FDD (measuring result file, measuring procedure file) USB-MEMORY: for connecting USB memory (measuring result file, measuring procedure file)
File output of measuring result	RS-232C output (CSV format, MUX-10 format)
Power supply	100V to 240V AC
Maximum power consumption	17W (without including options)
External dimensions (mm)	Approximately 260×242×310mm (including a stand)
Weight	Approximately 2.9kg
Applicable model	MF D / MF-U D

* To denote your AC line voltage add the following suffixes to the order No.:
(e.g.: 264-155D); D for CEE, E for BS

Optional accessories

We offer various optional accessories designed to increase microscope usability. These optional accessories are very popular among our customers. They include the focus pilot, which reduces focal point variation; a power turret and power focusing unit, which can be used to change the focus or magnification under precise power control and a rotary table, which has a fine-adjustment knob for comfortably rotating objects under inspection. You can also select the polarization and differential interference contrast unit to support microscopic observation, the TV port adapter to attach a camera, which is required by many people during simultaneous analysis and evaluation, and other optional accessories as required.

Focus detection unit Focus Pilot		
Model type	FP-05	FP-05U
Order No.	375-057* (Green) / 375-058* (Red)	375-067* (Green) / 375-068* (Red)
	Green LED or Red LED	
Light Source	•Concentric circle pattern	•Slit pattern
	 	 
	<ul style="list-style-type: none"> The focal point is the position where the top and bottom of the pattern are aligned. The brightness can be adjusted according to the reflectivity of the surface. Observation with a wide field of view on a TV monitor using 5X optical magnification is available. 	
Focusing reproducibility	Approximately 1.5μm (when using a 20X lens) ... This is a reference value based on an inspection performed using our standard sample.	
Optical magnification	0.5X	
Magnification accuracy	± 0.1% (within 2/3 of the center of the field of view)	
Camera	Supports up to 2 1/3 inch	
TV adapter	Equipped with C-mount, centering or parfocal adjusting mechanism	
Power supply	100 to 240V AC, Maximum power approximately 10W	
External dimensions (mm)	Main unit: 131(H) Console box: 90(W)×78(H)×178(D)	
Applicable model	MF D	MF-U D

Note: The combination of MF-U and FP-05U is a factory-installed option.

Sliding Nosepieces (Factory-installed Option)	
Order No.	176-370-1
	The lens mounted at the centering mechanism (standard) position and the lens mounted at the focal point adjusting mechanism position are parfocal. Note: The magnification of the lens mounted at the focal point adjusting mechanism position is not guaranteed.
Order No.	176-370-2
	Magnification of the lens mounted at the centering mechanism (standard) position and that of the lens mounted at the focal point adjusting mechanism position are guaranteed. Note: The two lenses are not parfocal.
Applicable model	MF D

Electric focus unit	
Order No.	Please contact your local Mitutoyo sales office.
	Attached to the Z-axis handle on the left side of the microscope to allow fine focus adjustment by turning the electric jog dial by hand. By using a jog shuttle, the variable speed coarse feed focus can be changed in 7-levels.
Maximum feed	0.4μm
Maximum drive speed	3.2mm/s
Driving method	Stepping motor (jog shuttle/jog dial)
Power supply	100 to 240V AC Maximum power consumption: approximately 20W
External dimensions (mm)	Main unit: ø69×99(L) Console box: 108(W)×72(H)×193(D)
Applicable model	MF-U D

Note: This unit is made to order.

Turrets

Applicable model	Required for MF-U D							

* To denote your AC line voltage add the following suffixes to the order No.:
(e.g.: 375-057D); D for CEE, E for BS

Optional accessories

Rotary table with fine feed wheel (A)

Order No.	176-305
External dimensions	280(W)×280(D)×23.7(H)mm Tabletop: ø240mm, 360° rotation, no angle scale
Mass	5.5kg
Effective glass diameter	182mm
Applicable model	Size 1010, 2010 (MF D / MF-U D)

Note: The V-block with clamp, swivel center support and holder with clamp can be mounted on the table.

Rotary table with fine feed wheel (B)

Order No.	176-306
External dimensions	342(W)×342(D)×23.2(H)mm Tabletop: ø270mm, 360° rotation, no angle scale
Mass	6.5kg
Effective glass diameter	238mm
Applicable model	Size 2017, 3017, 4020 (MF D / MF-U D)

Note: The V-block with clamp, swivel center support and holder with clamp can NOT be mounted on the table.

Rotary table with fine feed wheel (with scale)

Order No.	172-198
External dimensions	240(W)×172(D)×19.7(H)mm T-groove pitch of the tabletop: 120 Tabletop: ø270mm, 360° rotation, minimum angle adjustment: vernier 2'
Mass	2.4kg
Effective glass diameter	96mm
Applicable model	MF D / MF-U D Note: Size 2010 is used with stage adapter B Sizes 2017, 3017, and 4020 are used with stage adapter

Note: The V-block with Clamp, Swivel Center Support and Holder with Clamp can be mounted on the table.

V-block with clamp

Order No.	172-378
	Maximum clamping diameter: 25mm Height from the mounting surface to the center: 38 to 48mm
External dimensions (mm)	117(H)×90(W)×45(D)
Mass	0.8kg
Applicable model	MF D / MF-U D Note: Size 2010 is used with stage adapter B. Sizes 2017, 3017, and 4020 are usable with stage adapter

Swivel center support

Order No.	172-197
	± 10° for swivel position Minimum angle index: 1° Suitable for measuring screws or other objects Maximum horizontal clamping size: ø80×140mm Maximum clamping size when inclined 10°: ø65×140mm
Mass	2.5kg
Applicable model	MF D / MF-U D Note: Size 2010 is used with stage adapter B. Sizes 2017, 3017, and 4020 are used with stage adapter

Holder with clamp

Order No.	176-107
Maximum clamp length (mm)	35
External dimensions (mm)	62(H)×152(W)×38(D)
Mass	0.4kg
Applicable model	MF D / MF-U D Note: Size 2010 is used with stage adapter B. Sizes 2017, 3017, and 4020 are usable with stage adapter

Stage adapter / Stage adapter B

Order No.	176-304 (for 2017, 3017, 4020) B: 176-310 (for 2010)
External dimensions for one piece (mm)	50(W)×340(D)×15(H) Note: Adapter B is 280(D).
Mass	1.5kg / B: 1.2kg
Applicable model	MF D / MF-U D

Note: The two pieces are provided as one set.

Polarization unit	
Order No.	378-092 (For both the bright-field model and the bright-field and dark-field model) Each polarizer/analyzer is provided as a one-piece set.
Applicable model	MF-U D

Differential interference contrast unit	
Order No.	378-080 (for 5X and 10X) 378-079 (for 20X) 378-078 (for 50X and SL20X) 378-076 (for 100X, SL80X, and SL50)
Applicable model	MF-U D

Note: Use this with a polarization unit.

Illumination filter		
For halogen illumination for a microscope*	GIF filter	12AA645
	LB80 filter	12AA646
	ND2 filter	12AA643
For a light source of reflected illumination (for 100 W fiber illumination)	ND8 filter	12AA644
	GIF filter	12AAG806
	LB80 filter	12AAG807

***MF D** (for both transmitted illumination and reflected illumination), **MF-U D** (only for transmitted illumination)

C-mount adapter	
Order No.	970441 This standard adapter is used to mount a device such as a digital camera to the TV camera port of a microscope. Note: This is not used when the Vision Unit is mounted.
External dimensions (mm)	ø45×22.5(H)
Applicable model	MF D / MF-U D

0.5X TV adapter (including C-mount adapter)	
Order No.	375-054 This standard adapter is used to mount a device such as a digital camera to the TV camera port of a microscope. This adapter enables observation with a wide field of view using a 0.5X minimum relay image. Magnification accuracy: ±0.1%, Image field diameter: 11mm Note: This adapter is included with the Vision Unit as standard.
External dimensions (mm)	ø45×123(H)
Applicable model	MF D / MF-U D

Stage micrometer	
Order No.	375-056
Scale length	1mm
Minimum graduation	0.01mm
Scale accuracy (20°C)	1+L(μm). L: length between any two lines (mm)
Scale	Negative type / Positive type
External dimensions (mm)	76(W)×26(D)
Mass	16g
Applicable model	MF D/MF-U D

Note: After selling the product, we perform calibration. For details, please contact a sales office near you.

Optional accessories

Mounting stand (for microscope)	
Order No.	176-309
Maximum loading	300kg
External dimensions (mm)	1200(W)×900(D)×650(H)
Mass	Approximately 50kg
Applicable model	MF D / MF-U D

Note: When specifying a microscope with the Vision Unit, we recommend selecting the large mounting stand No. **02ATE760**, which has external dimensions of 1,800(W)×900(D)×740(H).

Vibration-damping stand	
Order No.	176-308
Supporting method	Spring pad
Maximum loading	200kg
External dimensions (mm)	750(W)×550(D)×36(H)
Mass	36kg
Applicable model	MF D / MF-U D

Lens cleaning set	
Order No.	12AAA165
	This exclusive set includes cleaner, cloth, a blower, cotton wads and other items for maintaining eyepieces and objectives.

Optional accessories

Whatever your challenges are, Mitutoyo supports you from start to finish.

Mitutoyo is not only a manufacturer of top quality measuring products but one that also offers qualified support for the lifetime of the equipment, backed up by comprehensive services that ensure your staff can make the very best use of the investment.

Apart from the basics of calibration and repair, Mitutoyo offers product and metrology training, as well as IT support for the sophisticated software used in modern measuring technology. We can also design, build, test and deliver bespoke measuring solutions and even, if deemed cost-effective, take your critical measurement challenges in-house on a sub-contract basis.
